

## FRP / Non-Metallic Helical Skimmer / Stainless Steel Helical Skimmer

---

### Non-Metallic Helical Skimmer

HMAX Helical Skimmers are available in both metallic (stainless steel) and non-metallic (FRP) for a broad range of application requirements.

#### Non-Metallic

A center tube of FRP with integral flanges and a high finish exterior makes for easy release of grease or solids, limiting build-up. The FRP helical skimmer eliminates all corrosion, ideal for harsh chemical applications.

#### Stainless Steel

Fabricated to the highest standards, these skimmers provide significant service improvements over competitive designs and feature unique spindle attachment points. The replaceable blades can be provided with chemical resistant materials. ([click here for PDF of specification](#))

All Hitachi Maxco Helical Skimmers are available in a wide range of diameters and lengths, Contact Hitachi Maxco for additional details.
